מר יחיאל גלבו
Philosophy of Technology
Abstract

Since the last decades of the 20th century, we are in the digital-culture (Hi-Tech) age. This culture brings with it extraordinary capabilities, which have never seen before, and which are changing rapidly the society worldwide. In this culture, where technology reigns - supreme in every aspect of our lives, some very serious questions raise: What is the meaning of life in the hi-tech age? How does technology affect the dynamics of society and its principal values? Where is technology guiding mankind? How should we deal with the development of technology and what limits should we put? And what does it mean regarding the technology / engineering education?

Yechiel Gilboa

Yechiel has long term of experience in Engineering & Business: His engineering experience is from the defense industry: development of systems in: computers, avionics, radar and communications. His Business experience is from the commercial industry with focus on telecommunications systems: marketing and top level management.

Yechiel holds a B.Sc. in electronic engineering, M.Sc. in electronic engineering and computer sciences, MBA and MA in Philosophy of science. Currently in process of writing a PhD thesis in philosophy of science, all from Tel Aviv University.
